

FP302 VS

AMENDMENT OF CLAIMS UNDER PCT ARTICLE 34(2)(b)

5 1. (Amended) A reflective film comprising a base layer made
of a resin composition including an aliphatic polyester based
resin as a main component, a metal thin film layer, and a
protective layer in this order, wherein the aliphatic
polyester based resin has at least polylactic acid based
10 resin, wherein the base layer is arranged on the side of
a surface used for reflection, has voids therein with a ratio
of the voids in the base layer being 50% or less, wherein
the film has an average reflectance of 90% or more in a
wavelength region of 420 nm to 700 nm when irradiated with
15 light from the side of the base layer, and wherein the resin
composition further contains fine powder filler.

2. The reflective film according to claim 1, further
comprising an intermediate layer between the base layer and
20 the metal thin film layer.

3. The reflective film according to claim 1 or 2, further
comprising an anchor coat layer between the base layer and
the metal thin film layer.

25

4. The reflective film according to any one of claims 1

to 3, wherein the metal thin film layer is a film vapor-deposited with silver alone or with an alloy of silver and other metal, or a laminate having at least one layer selected from the group consisting of a silver vapor-deposited film and the vapor-deposited film of the above-mentioned alloy.

5. (Deleted)

10 6. (Deleted)

7.(Amended) The reflective film according to any one of claims 1 to 4, wherein the resin composition further contains a hydrolysis preventing agent.

15

8.(Amended) The reflective film according to any one of claims 1 to 4 and 7, wherein the blending amount of aliphatic polyester resin/fine powder filler is 90/10 to 40/60 by mass ratio.

20

9. The reflective film according to claim 7 or 8, wherein the blending amount of the hydrolysis preventing agent is 0.1 to 3.0 mass parts per 100 mass parts of the aliphatic polyester resin.

25

10.(Amended) The reflective film according to any one of

claims 1 to 4 and 7 to 9, wherein the base layer is a film obtained by drawing a film made of the resin composition at least monoaxially to an area ratio of 5 times or more.

- 5 11.(Amended) A reflective plate for a liquid crystal display device, wherein the reflective plate for a liquid crystal display device comprises the reflective film according to any one of claims 1 to 4 and 7 to 10.
